

Color Background LightScribe Media

New Color Background LightScribe Direct Disc Labeling is a new technology that offers consumers and businesses a simple, no-hassle way to burn professional, silkscreen-quality labels on their CDs. Using the same laser that burns data in their disc drives, customers burn their data as always, flip the disc over, re-insert it into the drive and burn a precise iridescent label on 5 various background color discs: yellow, red, blue, green and orange. Now Media Version 1.2 allows you to burn professional, quality labels on color background CDR discs in 20 to 25 minutes*.

This iridescent color background LightScribe media is an ideal solution for organizing, filing and storing digital images, music and more! Verbatim media provides uncompromised quality for ultimate performance while burning at high speeds. This media is compatible for maximum 52x speed recording. Record a CD in less than 2 minutes using a 52x CD drive, yet this media is also backward compatibility with existing 1x-48x drives.

Key Components - LightScribe Direct Disc Labeling technology requires three elements:

- **LightScribe-enabled optical disc drive (ODD)** – Minor modifications to the optical disc drive provide for validation of media types and control of sled position, spindle speed and focus to burn the label on LightScribe-compatible media
- **LightScribe-compatible media** – A micro-thin, multi (5) color coatings of a highly specialized material enables a LightScribe-enabled ODD laser to impart energy to the label side of compatible media. Consumers can readily identify LightScribe-compatible media through the LightScribe logo, found on media packaging and in the hub area of every disc. (Color Background – Media Version 1.2)
- **LightScribe-supported software applications** – Licensed software applications tap lower-level software system services to connect the user experience to the firmware controls, delivering the user's desired label to the imaging system. Firmware upgrade maybe required for optimal label burning speeds of the new color background discs.

PN#	Description	Speed	Capacity
95460	Color LightScribe CDR 25Pk Spindle	52X	80 Minute / 700MB
